

DETOXIFICATION SYSTEM

Detoxification allows the body's eliminative channels to get rid of cellular debris and metabolic byproducts from the cells, organs, tissues, bloodstream and lymphatic system. It is an essential step on your path to maintaining health.

Cleansing, the First Step to Optimal Health

Promote Cleansing and Detoxification from the Inside

Most people understand how important it is to keep their bodies clean on the outside, but few realize that it's equally important to keep themselves clean on the inside. Your body is constantly performing many natural functions to keep itself clean. Most of us take these processes for granted. Periodic cleansing and detoxifying helps to keep open the eliminative channels to help the body systems run cleanly, uninhibited by metabolic debris and waste.

Nature's Sunshine offers a variety of products that support cleansing and detoxification.

Tips for Cleansing and Detoxifying

◆
Avoid red meat,
fried and sugary foods
and alcohol.

◆
Eat lots of raw
vegetables and fruits,
and drink plenty of
pure water.

CLEANSE

Consider the effects of the years (or decades) of donuts, potato chips, beef steaks and soft drinks. Your digestive and intestinal systems take care of some of that accumulated junk, but these systems were not made to run on refined flours and sugars. A proper cleansing of the digestive and intestinal systems enhances the efforts of the body's digestive processes.
